

Fingerprint Safety Statement

We, Guangzhou Hysoon Electronic Co., Ltd. here by certify that Hysoon's fingerprint terminals are based on a digital encryption technology process rather than a direct comparison of fingerprint image processing mode, therefore the image is not kept in the device. The user can enroll fingerprints to a terminal through the PEFIS core algorithm, to collect, encrypt, compress and extract useful fingerprint with special diameter points, then convert them into digital codes and store in memory. This process is not reversible, so it is not possible to retrieve users' original fingerprint image. The ability to duplicate the original image and prove the identity via a fingerprint expert is not possible.

Hysoon products keep all users' fingerprint information absolutely safe and confidential.
